

Junior Backend developer

Parklio is a group of passionate problem-solvers that values team, clients and user experiences just as much as the software and hardware that we build. We hold each other accountable, challenge ourselves to pursue excellence in everything we do, and are intentional about becoming market leader in parking and mobility services.

In order to expand our core development team, we need a Junior Backend developer with experience in Node.js or Laravel which can support us in developing some revolutionary features which will be used across the globe. This is a rare opportunity to work in a company which has its own product and production line, robotic arms and other high tech machines which are used to build best parking products in the world under the brand of Parklio.

Responsibilities:

- › Develop client/server API interactions, database models and server functionality for enterprise-grade SaaS products
- › Develop microservices to enhance and optimize our products
- › Constant improvement of our products by utilizing new technologies
- › Work and collaborate with the rest of the engineering team

Requirements:

- › Knowledge and experience with Node.js or Laravel
- › Strong problem solving and debugging skills
- › Willingness to learn from, work with and interact with a team
- › +1 years of experience in the required fields
- › Git experience
- › Additional bonus is experience with CI/CD and Docker
- › Linux knowledge
- › Familiarity with the whole web stack, including protocols and web server optimization techniques

What do we offer?

- › Competitive salary in accordance with knowledge and experience
- › Vacation policy adjusted to your needs
- › Work with the latest technologies
- › Work on a unique parking solution used worldwide
- › Opportunity for further development within a fast-growing company present in over 35 countries in the world
- › Unlimited budget for educations (online courses, books, etc...)
- › Flexible working hours
