PARKLIO GATEWAY

Placed in the middle of Parklio universe, Parklio Gateway enables remote control of more Parklio barriers regardless of the current location. It serves as an intermediary between the barrier and end-user. Besides coordinating with multiple barriers, Parklio Gateway gives real-time parking information.

It offers simple and reliable insight into parking spaces on the computer or smartphone and with one click it is possible to control Parklio barriers with no distance limitation.

Parklio gateway provides a solution for more effective usage of the parking spaces. Managing and monitoring parking lot occupancy are possible via user-friendly CMS.

Parklio Gateway helps owners of established car parks and property owners to generate and maximize revenue through car parking operations using the latest parking technology.

Parklio CMS provides detailed analytics of user behaviour and business flow which can bring additional value to the business.

It is ideal for businesses with many parking spaces and a constant flow of users.

Thanks to the Parklio Gateway, Parklio API is available for the integration of Parklio barrier into any existing systems.
